What not?

What there for?

We can't deliver

- Ready instructions for action
- General suitable formulas

Make an offer to

- share information's
- discuss experiences and
- develop answers together

What themes?

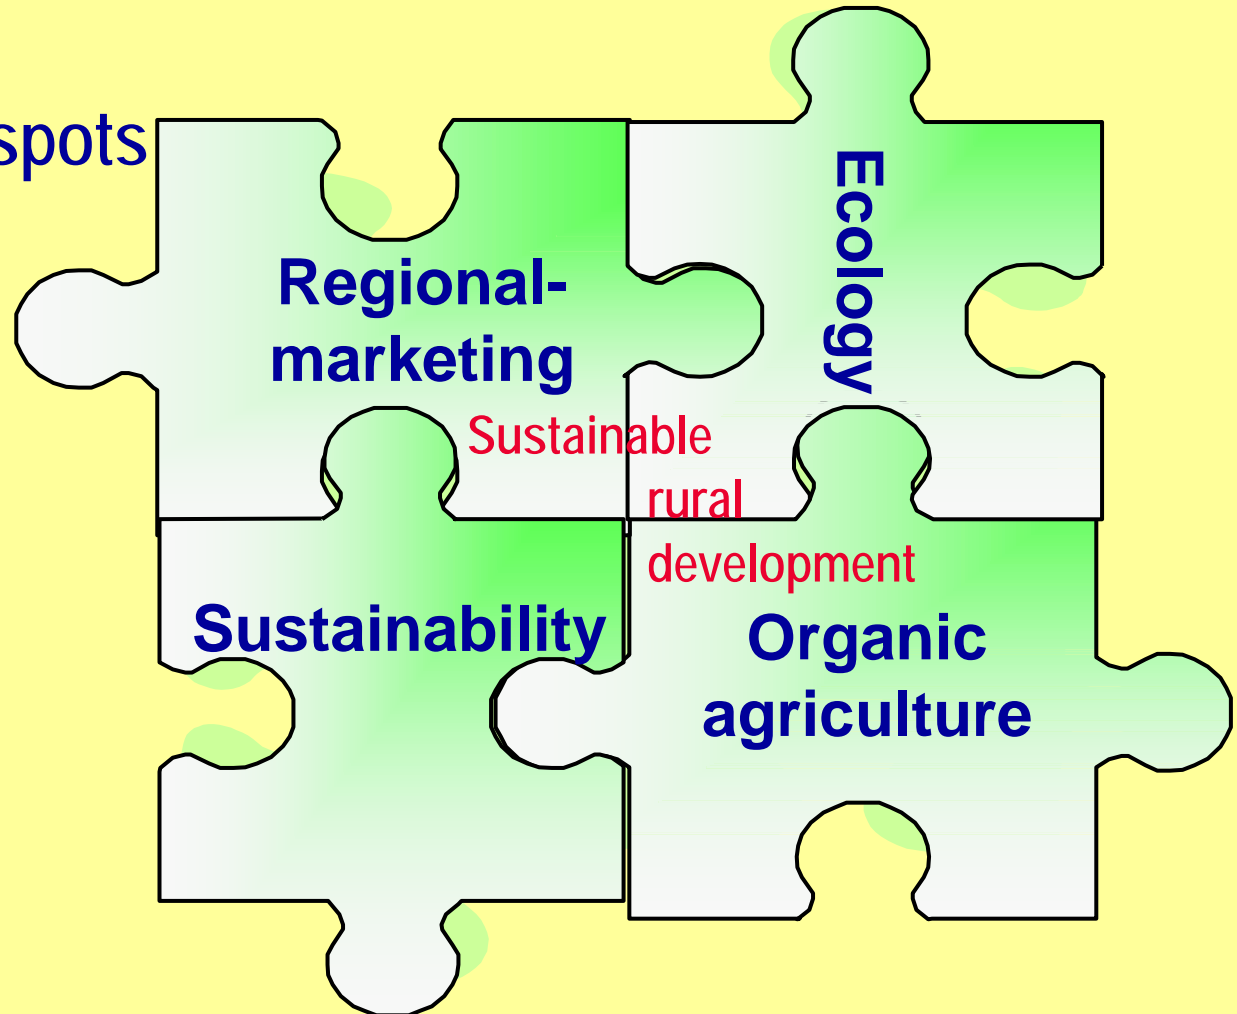

Basic Principles and Keywords about

- Ecology
- Sustainability
- Organic agriculture
- The Network UNSER LAND
- Sustainable local development

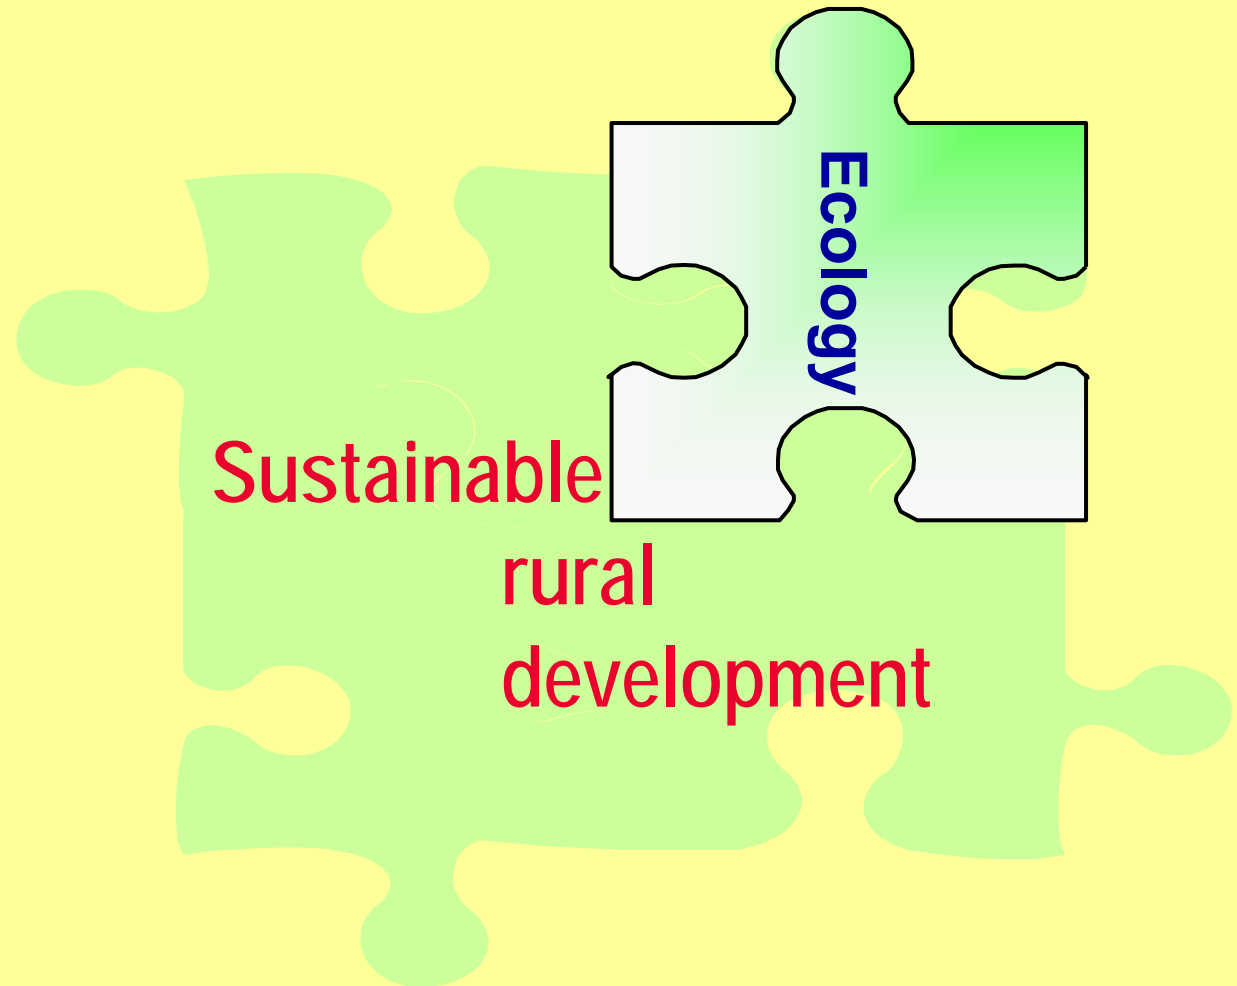

Even the biggest picture....

...is composed
of „single“ spots

Some „basics“

Ecology – what does it mean?

Ecology

greek

„oikos“ - „logos“

=
House(-hold) - Science

➔ Science of the household of nature

Ecology means diversity and wealthiness

Ecology means diversity and wealthiness

1 m² meadow-soil keeps:

200	Woodlouses
400	Ants
700	Spiders
900	Beetle-/larvae
1.800	Multipedes
2.000	Earthworms
20.000	other Worms
40.000	Colemboles
120.000	Acarians
9.000.000	Nematodes
500.000.000	Monads
1.000.000.000	Fungi
60.000.000.000.000	Bacteria

Ecology means Coherences and closed circuits

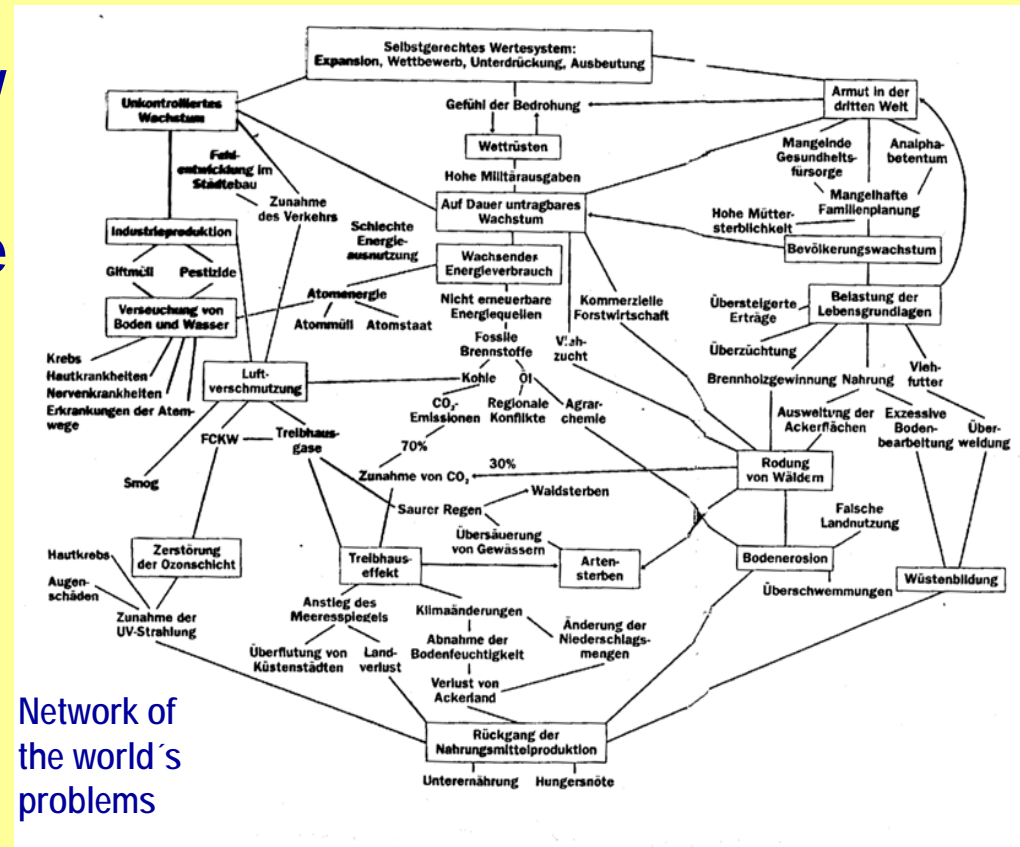

Ecology is the dependency between organisms and the environment in a whole

Ecology means Coherences and closed circuits

Ecology is the dependency between organisms and the environment in a whole

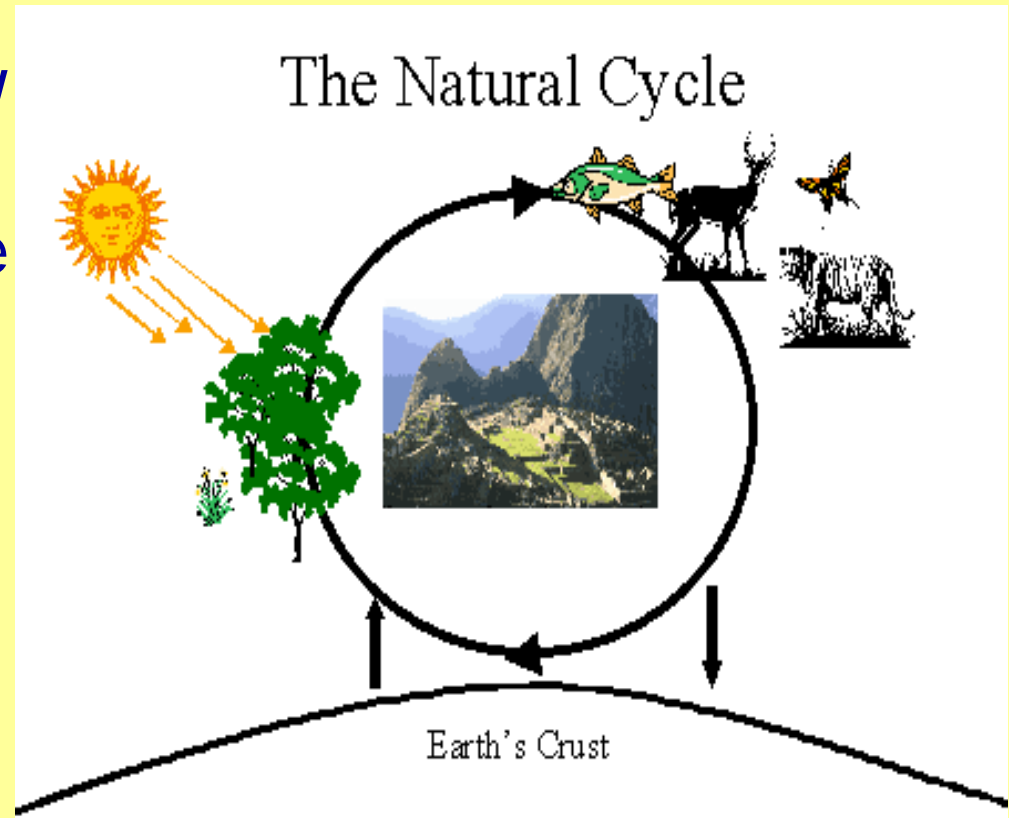

Ecology means Coherences and closed circuits

Ecology is the dependency between organisms and the environment in a whole

Ecology is the science of cycles -

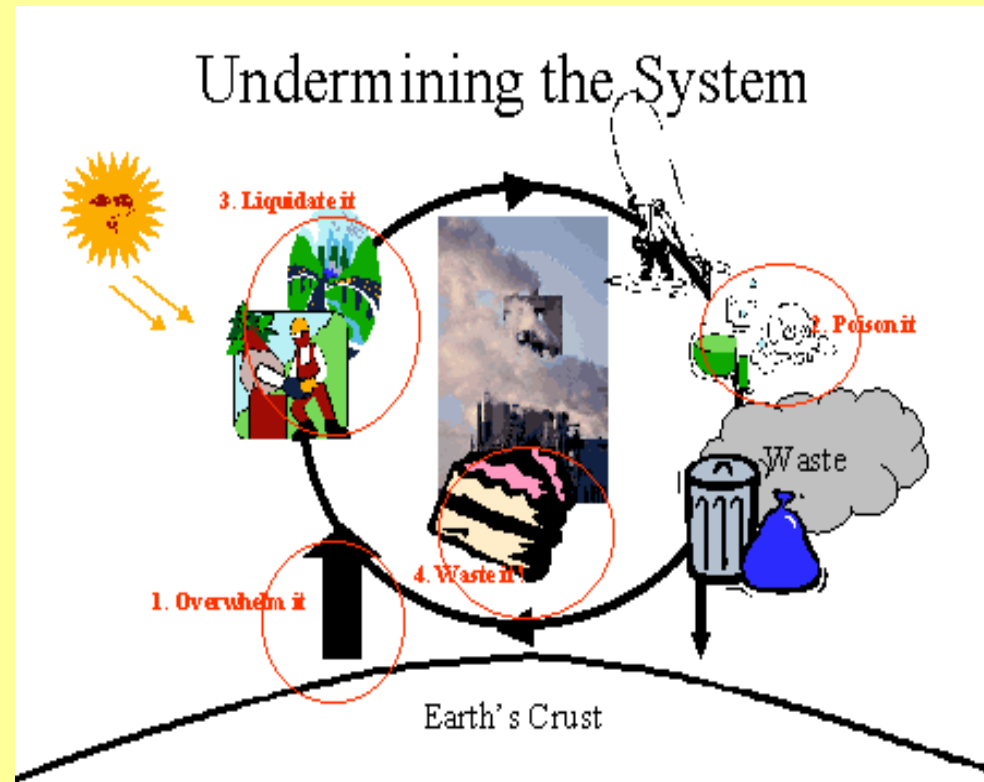

Ecology means Coherences and closed circuits

Ecology is the dependency between organisms and the environment in a whole

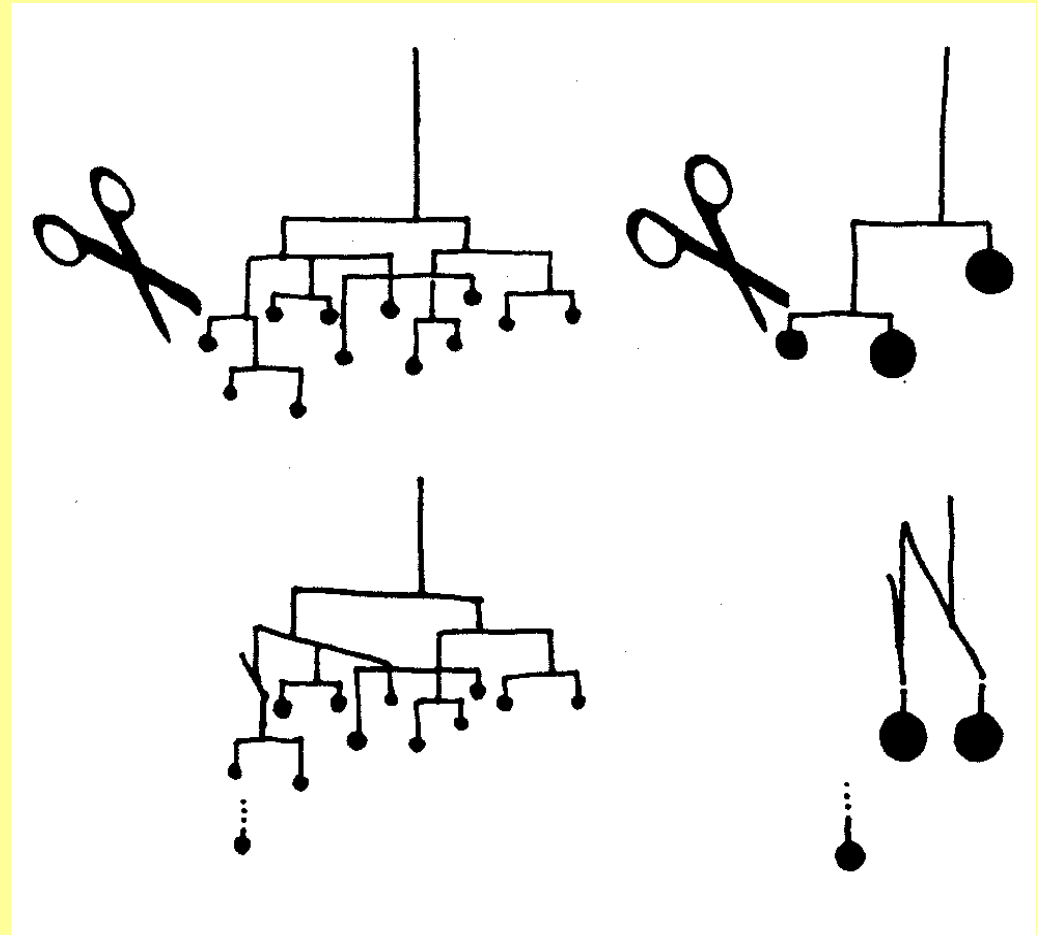

Ecology is the science of cycles -
there is no beginning and
no end

Ecology means: „Diversity save Balance“

- Ecosystems are
 - and ➤ multifarious
 - and ➤ small structured
 - not
 - and ➤ monotone
 - and ➤ monopolistic
- They usually are
 - steady
 - not fixed

Ecology means: „Diversity save Balance“

- Ecosystems are
 - and ➤ multifarious
 - and ➤ small structured
 - not**
 - and ➤ monotone
 - and ➤ monopolistic
- They usually are
 - steady
 - not fixed
- Components may change, but not the whole system
