

Right to water and sanitation

Access to Safe Water in Ukraine

- 11 mln (74%) of rural population use wells
- 800,000 use transported water
- 1,8 mln wells are contaminated by nitrates, microorganisms, pesticides, fluorine, others

Access to affordable water

- At the end of 2006, the tariffs of water supply and sanitation services, increased dramatically 2-3 times, depending on the city
- For low-income families this can represent more than 4-10% of their income
- Disconnection will be introduced as a regular practice by water utilities

Access to Safe Sanitation in Ukraine

- 14.3 mln (91%) - pit latrines and sep tanks
- As usual pit latrines and septanks are the sources of nitrates and biological contamination of ground water

Rural school : water supply and Sanitation provision

- Among 20 961 schools there are 20 % schools are not connected to centralized WS and use well or transported water
- 35 % of schools are not connected to canalization and use the pit latrines

Right to access to safe and affordable water and sanitation

The right to safe water is already in the Ukrainian drinking water legislation, but the State has to guarantee its implementation
